

Google Maps is another excellent (free) program to find and print road and area maps for all over the Earth. The controls are easy to master and the secret is to just play around until you figure it out.

Check out the 'Satellite & Hybrid' mode switches at the top right hand side of the map to show further details such as super impose map over photo as shown below.

'Hybrid mode' super imposes the map onto the satellite photo of the area!

Have fun with Google Maps !
