

# Rogue Security Programs

By Jon Benjamin – [www.exenviod.com](http://www.exenviod.com)

A new outbreak of '**Rogue Security Programs**' has hit the internet in a devastating new attack method. These programs **trick you** into believing something is wrong with your computer.

Please read this important article to learn more about this situation:

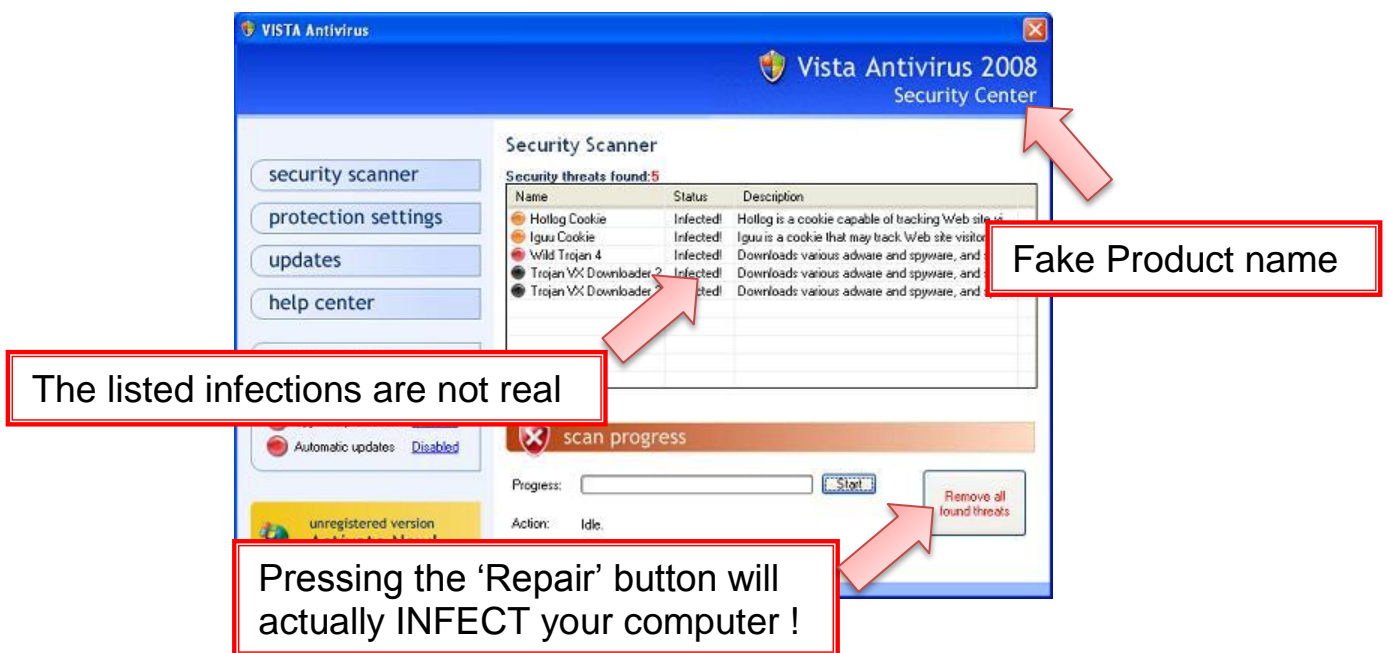

★ [http://en.wikipedia.org/wiki/Rogue\\_security\\_software](http://en.wikipedia.org/wiki/Rogue_security_software) ★

**If you are attacked, shut down the computer immediately !**

**DO NOT CLICK ON THE REQUESTOR - DO NOT FOLLOW THEIR INSTRUCTIONS!**

If you do, you are simply giving them 'permission' to infect you and totally by pass all your real security programs.

This is an screen shot of an attempt to hijack a computer showing an example of a 'Rogue program' requesting you to click something; ~ very dangerous situation:

Note that they disguise their products with similar names to commonly used 'Real security programs'. Always check the NAME of the program to ensure it is one of the legitimate security programs you have installed on your computer.

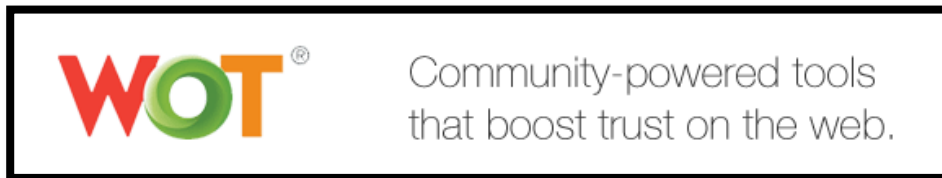

Once these types of infections get control of your computer they will hold you to ransom asking you to pay them money to rectify the situation. If you get attacked from one of these criminals you should;

**Shut down your computer and call for help immediately !**

**DO NOT PAY THEM TO FIX YOUR SYSTEM THEY ARE CRIMINALS!**

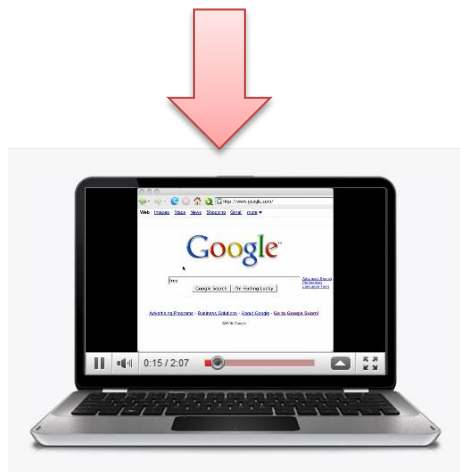

To help avoid Rogue Security attacks,  
I highly recommend installing:

**WOT** 'Web Of Trust' browser security filters

 <http://www.mywot.com/en/download> 

Watch the video to understand how it works  
( click the screen )

This is a new level of protection that I am installing and demonstrating on all on-site service calls now. It can be installed on most browsers and also has a 'colour blind' mode.

I can install and demonstrate this new protection system **remotely** if you need help ( \$25.00 fee ) Remote Access is explained here;
